Summary

Motivated Data Science & Artificial Intelligence Master student with hands-on expertise in Machine Learning, Computer Vision, Deep Learning (PyTorch, TensorFlow), and MLOps/API microservices (FastAPI, Streamlit, SQL). Experienced in designing end-to-end ML pipelines, deep CNN architectures for agricultural plant disease detection, medical image segmentation (polyp/cancer detection), and predictive modeling. Seeking a 6-month PFE / Master Thesis internship in Machine Learning Engineering, Computer Vision, or AI Research.

Education

2025 – Present **Master, Excellence in Data Science and Artificial Intelligence** Agadir
Faculty of Science Ibn Zohr

2024 – 2025 **Bachelor (Licence), Excellence in Data Science and Artificial Intelligence** Agadir
Faculty of Science Ibn Zohr

2021 – 2023 **University Diploma of Technology (DUT), Computer Science** Laayoune
Ecole Supérieure de Technologie

Skills

Programming
Python, Java, C/C++

Computer Vision
OpenCV, Image Segmentation, Edge Detection, Spatial Filtering, Fourier Transform, Image Enhancement, Medical AI (Polyp & Cancer Detection)

Databases & Visualization
SQL Server, MySQL, SQLite, Power BI, Matplotlib, Seaborn

Tools
Jupyter, Colab, VS Code, MATLAB, Git, GitHub

ML & Deep Learning:
PyTorch, TensorFlow, Scikit-learn, XGBoost, ANN, CNN, Linear/Logistic Regression, SVM, KNN, K-Means, Time Series Analysis

Data Science & Development
Pandas, NumPy, Scikit-learn, Data Analysis, FastAPI, Streamlit, Docker (Basics), Git/GitHub, Object-Oriented Programming (OOP)

Mathematics & Statistics
Optimization, Statistics, Probability, Linear Algebra

Communication
Arabic, English, French

Projects

2025 **Plant Disease Detection**

- Curated and preprocessed dataset of 10,000+ agricultural leaf and medical diagnostic images.
- Trained and evaluated deep Convolutional Neural Networks (CNNs) in PyTorch and TensorFlow, achieving 94.8% classification accuracy.
- Applied advanced Computer Vision techniques including OpenCV spatial filtering, edge detection, Fourier transform analysis, and image segmentation.
- • Developed and deployed an interactive real-time inference web application using Streamlit.

2025 **AgriSmart Project**

- Designed and implemented an end-to-end machine learning pipeline predicting crop yield using XGBoost and Scikit-learn ($R^2 = 0.92$).
- Built automated feature engineering, cross-validation, and model serialization workflows.
- Deployed production-ready REST API endpoints using FastAPI integrated with a relational SQL database.

2025 **Movie Recommendation System**

- Developed a scalable content-based recommendation system leveraging Cosine Similarity and TF-IDF vectorization.
- Optimized similarity query latency and built an intuitive user interface using Streamlit.
